**JFIXUP**  
POWERFUL DATA, SMART SOLUTIONS

We collect  
**powerful data,**

We build smart  
**solutions.**

# Our mission

We create cutting-edge, customized projects that enhance the operational efficiency of any business.

We design and develop advanced IOT solutions, electronic engineering, software development, and artificial intelligence to optimize business processes.

We help companies achieve their goals, innovate, and grow through effective technological and strategic consulting.

# Our vision

In an increasingly interconnected world, Fixup is your go-to partner for digital transformation.

Through innovative technological solutions, we connect people, assets, and systems.

We turn data into intelligent solutions, essential for improving operational efficiency and supporting strategic decision-making.

One company,  
**endless possibilities.**

**For 15 years**  
supporting entrepreneurs.

# What we do for your business

At Fixup, we design, develop, and implement **cutting-edge technological solutions** for companies looking to leverage **digital innovation** to optimize production processes, reduce costs, and maintain full control.

Every solution, device, and software is created **based on the client's needs**, with utmost attention to reliability and efficiency.

Our offerings are not just services, they are **solutions** designed to address **real-world challenges**.

# **IOT & M2M Solutions**

We design tailored IOT solutions, fully aware that a company's needs are not static but evolve with market changes, business growth, and the adoption of new technologies.

By optimizing the use of IOT objects in business processes, devices, sensors, and machinery can be made intelligent, actively collecting and communicating data.

# **Software, Firmware & Hardware Engineering**

We develop cutting-edge solutions for businesses, from hardware design to integration with customized software and firmware tailored to our clients' needs.

These are scalable solutions, fully compatible with existing machinery and devices.

# Artificial Intelligence in the IOT field

By combining IOT with Artificial Intelligence, intelligent systems are created that not only collect data but also interpret, analyze, and use it to make autonomous real-time decisions.

## Asset & Vehicle management Solutions

Fixup develops software for managing company assets and fleets. Constant, integrated communication between a wide range of hardware, such as satellite devices or GPS trackers—and software interfaces provides complete and secure control over your vehicles and personnel.

## Global connectivity

We offer secure, stable, and effective connectivity solutions. Thanks to our extensive experience and the use of cutting-edge connectivity technologies, we can meet the diverse needs of the market.

Our solutions range from radio to satellite communication, from SIM cards to mobile traffic aggregation.

# Why choose **Fixup**

From predictive maintenance to efficient field personnel management, Fixup makes activity analysis and distribution simpler, smarter, and more optimized.

Thanks to our customized solutions, companies can monitor and coordinate their operations in real time, reducing waste, boosting productivity, and ensuring a more efficient workflow.

With over 15 years of experience, Fixup has established itself as a leading player in Italy's digital transformation landscape for businesses.

With **Fixup**, your  
company's digital  
future is always within  
reach.
